FLOLIVE® × THINGSDATA · SOLUTION BRIEF

Built for the dashcam that can't go offline

Always-on. Cross-border. Evidence-ready.

Dashcams only protect your fleet when they stay connected. Whether your vehicles are crossing borders, moving through remote areas, operating in dense cities, or running critical emergency routes, your teams need video, alerts, and vehicle data to keep flowing. FLOLIVE® and Thingsdata ensure that connection, keeping your fleet online across any route and mobile network.

Coverage that follows your fleet

Multi-network SIMs. Your camera auto-connects to the strongest local signal, with no coverage gaps.

Borderless handovers. Your vehicles keep working from one country to the next, with no SIM swaps.

Built-in failover and wide coverage. If a network drops, you switch instantly, ensuring uploads and live views never stall – from city centers to remote routes.

Stays online where others get blocked. China, Brazil, India, and other strict markets limit foreign SIMs. Local connectivity keeps your cameras compliant and live.

Full coverage. Two to three leading operators in every country, because no single operator provides full domestic coverage.

Real-time reliability

No dropped uploads.

Event clips, alerts, and live views keep flowing. Sessions recover the instant signal returns.

See every camera in real time.

Know the moment a device goes offline, is tampered with, or spikes in usage. Act before the shift ends.

Fix it without a truck roll.

Switch on, diagnose, and manage connectivity remotely. Field problems get solved from your desk.

Performance you can see

Bandwidth for high-resolution video.

HD, 4K, and multi-camera feeds get the throughput they demand. Live view and clips stay smooth and full quality, never choppy or stalled.

Low latency, live the instant you look.

Live view and two-way audio connect on the first tap. Incident alerts reach the back office the moment they happen, so your team acts while it counts.

Upgrades over the air.

Push new firmware and AI models to the whole fleet remotely. Pull back the footage your analytics need. No site visit, no downtime.

Built for AI-powered cameras

Get models onto every camera. Push new AI models and firmware over the air to the whole fleet at once, so on-device AI stays current. Every update lands remotely, and the fleet keeps running.

Run inference close to the camera. When video AI runs off the device, Flolive terminates your traffic at a local PoP, so your inference workload sits milliseconds from the camera – real-time results, processed right where the footage lives.

Keep AI data in-country. Local breakout keeps video and inference data inside the sovereignty zone it was recorded in, so you stay aligned with the data-sovereignty and privacy rules now shaping AI.

PoPs where your fleet runs. As data-residency demands reach new markets, Flolive places local breakout where your cameras operate, so coverage grows with you.

Security built into the connection

Footage stays private. Your traffic runs over a private APN and encrypted VPN, away from the public internet. Clips stay sealed off from camera to cloud.

Data stays in-country. In-region routing keeps data inside each market. You stay aligned with GDPR, CCPA, and local privacy rules.

Certified and proven. Both Flolive and Thingsdata are ISO 27001 certified. The whole connectivity stack is owned and controlled end to end, so security meets enterprise standards.

Locked down by default. Lock each SIM to its camera to stop theft and fraud. Device IP addresses stay hidden. Cameras only connect to the destinations you approve, so nothing else gets in or out.

Costs that work in your favor

Pay only for live cameras. A device in the warehouse or in transit costs you nothing. The months between manufacturing and first activation never land on your bill.

Flexible, pooled data plans. Mix and match data bundles per camera, scale up or down monthly, and let active SIMs share one data pool, so unused capacity on one camera covers a spike on another.

No lock-in. No activation fees, no minimum commitment, monthly cancellable. You're billed only for SIMs actually in use.

You set the plans. Offer your customers prepaid, postpaid, or pooled data on your own pricing. Real-time billing stops overage before it starts.

Connectivity that carries your name

Your brand, end to end.

The connection, the dashboard, and the app your customers log into all carry your name.

A new line of revenue.

Bundle connectivity into your offering and earn on every active vehicle.

Bring your resellers in.

Set up distributors and partners with their own accounts under you. Run the whole chain from one place.

What you need vs. an off-the-shelf SIM

ON THE ROAD	OFF-THE-SHELF SIM	FLOLIVE + THINGSDATA
Coverage on the move	✗ Drops at borders and dead zones	✓ Stays online across borders, automatically
When signal drops	✗ Footage stops uploading	✓ Switches network instantly, upload continues
Live view and alerts	✗ Laggy or after-the-fact	✓ Low-latency, real-time
Footage security	✗ Rides the open internet	✓ Private APN and VPN, in-country
When a camera goes dark	✗ You find out the next day	✓ Real-time alert, fix it remotely
Who sets the plans	✗ The carrier's fixed bundles	✓ You define plans, in real time, with no overcharge
Whose brand	✗ The carrier's	✓ Yours – your logo and your portal

About Flolive

Flolive is the first global network purpose-built for intelligent IoT operations in the AI age. Built entirely in-house and spanning 190+ countries, Flolive goes beyond connectivity, pairing a distributed core and local breakout with real-time network intelligence so your global deployments behave locally everywhere: seamless, secure, adaptive, and ready for AI-driven operations. Flolive provides mobile cellular connectivity for global IoT, operating one of the world's largest cellular networks with local profiles, multi-IMSI SIMs, low latency, and end-to-end security and compliance, so your devices stay connected wherever they go.

About Thingsdata

Thingsdata helps organisations keep their IoT devices connected, secure and manageable, from the first test to full-scale deployment. Based in Amsterdam and a Flolive Gold Partner, Thingsdata connects more than 1 million devices across 190+ countries. Customers get multi-network SIMs that switch automatically to the strongest available network, along with the routers and gateways to match. Through Thingsdata Control, our connectivity management platform, teams activate, monitor and troubleshoot every SIM remotely. Thingsdata is ISO 27001 certified and supports customers with flexible subscriptions and hands-on implementation. Every customer works with a dedicated European team, from business case to day-to-day management.

Your camera is your evidence. Your connection is your lifeline.

Let's make sure it never drops.

Let's talk deployment
